

Installation Instructions

Basin waste with free-flow or click-clack - BW.210

Installing Method

This waste can be fitted as either a click-clack or free-flow waste.

CLICK-CLACK - A click-clack waste allows the plug to be opened and closed by a simple push action with the fingertips. This allows the basin to be filled.

FREE-FLOW - A free-flow locks the plug in the open position. The free-flow option should be used on basins that have no overflow to prevent flooding.

Locked in open position

CHOOSE - Please choose the grey piece shown below according to whether you require the click-clack or free-flow option for part A opposite:

IMPORTANT - Please always perform a leak test after installation, checking under the basin for any water droplets.

Please remember to complete the online guarantee application form at www.armera.co.uk
